## PROJECTS

**Heart disease prediction using data mining | 2019 – 2020**
This is an Android application. This system will predict whether a person is having heart disease according to their blood glucose, blood pressure, and age. This application can be used for doctor booking, viewing their reports online and etc.
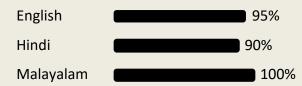

**Scratches: Online shopping cart for customized arts | 2022**
An online shopping website for buying and selling customized art products. This was a mini-project. This was an e-commerce website made using HTML, CSS, and PHP. I've also used MYSQL and PHP for back-end development.

**Symptoms based disease predictor & Image Recognition | 2022**
This project was done for an Ayurvedic hospital. I've developed a website for this hospital for viewing reports updating doctor details and bookings and such. Also developed an Android application. This was for patients. I've done this project in the Flask framework. Also used Random Forest and decision tree algorithms for predictions.

**Ayurvedic Hospital website**
This project was done for an Ayurvedic hospital. Developed a website and an Android application that allow patients to view doctors' details, book appointments, and access various reports. The application uses Random Forest and Decision Tree algorithms to predict diseases based on the symptoms entered by the user. It also suggests Ayurvedic medicine for curing the predicted disease. The website and application were built using Flask framework.

## LANGUAGE KNOWN
